Please find below and/or attached an Office communication concerning this application or proceeding.

Commissioner of Patents and Trademarks

Office Action Summary

Application No.
09/812,541

Applicant(s)
Lubenow et al.

Examiner
Arun Chakrabarti

Art Unit
1655

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136 (a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on Mar 20, 2001.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11; 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 2, 3, 13-30, 32, 34, 36-39, and 44-69 is/are pending in the application.
- 4a) Of the above, claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 2, 3, 13-30, 32, 34, 36-39, and 44-69 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claims _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are objected to by the Examiner.
- 11) ☐ The proposed drawing correction filed on _____ is: a) ☐ approved b) ☐ disapproved.
- 12) ☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. § 119

- 13) ☐ Acknowledgement is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d).
- a) ☐ All b) ☐ Some* c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- *See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgement is made of a claim for domestic priority under 35 U.S.C. § 119(e).

Attachment(s)

- 15) ☒ Notice of References Cited (PTO-892)
- 16) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 17) ☒ Information Disclosure Statement(s) (PTO-1449) Paper No(s). 2
- 18) ☐ Interview Summary (PTO-413) Paper No(s). _____
- 19) ☐ Notice of Informal Patent Application (PTO-152)
- 20) ☐ Other: _____

Art Unit: 1655

DETAILED ACTION

Specification

1. Claims 1, 4, 9-12, 31, 33, 35 and 40-43 have been canceled without prejudice towards further prosecution. Claims 2, 3, 13-16, 18, 19, 23-30, 32, 34, 44-47, 49, 50, 54-64 and 66 have been amended. New claims 67-69 have been added.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371© of this title before the invention thereof by the applicant for patent.

3. Claims 2-3, 13-18, 19, 23, 24, 32, 34, 44-50, 54, 55, 62-66 and 68 are rejected under 35 U.S.C. 102 (e) as anticipated by Zhang et al. (U.S. Patent 5,942,391) (August 24, 1999).

Zhang et al teaches a method for isolating a molecule from a sample in a vessel (Example 1 and Example 9), comprising the steps of :

a) providing a multiplicity of magnetic affinity particles and incubating the particles in the presence of a detergent (Example 1, Column 27, lines 31-40, Example 9, column 39, line 56 to column 40, line 4);

Art Unit: 1655

b) combining the sample containing a molecule of interest with the affinity particles suitable for binding the molecule, the affinity particles being insoluble in the sample (Example 1, Column 27, lines 31-40, Example 9, column 39, line 56 to column 40, line 4);

c) immobilizing the magnetic affinity particles by applying a magnet to the vessel (Example 1, column 27, lines 42-46 and Example 9, column 40, lines 9-12);

d) separating the remainder of the sample from the immobilized magnetic affinity particles (Example 1, column 27, lines 45-46 and Example 9, column 40, lines 11-12);

e) optionally, resuspending the affinity particles in a solution (Example 1, column 27, lines 50-52 and Example 9, column 40, lines 12-18);

f) optionally, eluting the molecules from the affinity particles, followed by separating the affinity particles from the eluted molecules (Example 1, column 27, line 52 to column 28, line 29 and Example 9, column 40, lines 19-39);

wherein any of the steps b), c), d), e) if present, and f) if present may optionally be also performed in the presence of the detergent, wherein the use of detergent is sufficient to reduce loss of particles during any separation step (Example 1, column 27, line 52 to column 28, line 29 and Example 9, column 40, lines 19-39).

Zhang et al teaches a method wherein the combining step (a) is carried out in the absence of detergent, but detergent is added prior to the separation step (b) (Example 9, column 40, line 6).

Art Unit: 1655

Zhang et al teaches a method wherein the molecule of interest is selected from nucleic acids (Examples 1 and 9).

Zhang et al teaches a method wherein the particles are selected from streptavidin-coated superparamagnetic beads (Example 1, column 27, lines 37-38 to column 28, line 29 and Example 9, column 40, lines 1-2).

Zhang et al teaches a method wherein the particles are composed of materials selected from Aluminum silicates (Example 9, Column 40, line 1).

Zhang et al teaches a method wherein the nonionic detergent P-40 , a polyoxyethylene sorbitol monolaurate, is at a concentration of from about 0.0005% to 2.0% (v/v) (Example 9, column 39, line 59 and column 40, line 6).

4. Claims 2-3, 13-18, 19, 23, 24, 32, 34, 44-50, 54, 55 and 62-66 are rejected under 35 U.S.C. 102 (b) as anticipated by Weisburg (U.S. Patent 5,466,577) (November 14, 1995).

Weisburg teaches a method for isolating a molecule from a sample in a vessel (Example 3), comprising the steps of :

a) providing a multiplicity of magnetic affinity particles and incubating the particles in the presence of an anionic detergent SDS (Example 3, column 8, lines 1-6);

b) combining the sample containing a molecule of interest with the affinity particles suitable for binding the molecule, the affinity particles being insoluble in the sample (Example 3, column 8, lines 10-15);

Art Unit: 1655

c) immobilizing the magnetic affinity particles by applying a magnet to the vessel
(Example 3, column 8, lines 15-19);

d) separating the remainder of the sample from the immobilized magnetic affinity particles (Example 3, column 8, lines 15-19);

e) optionally, resuspending the affinity particles in a solution (Example 3, column 8, lines 20-23);

f) optionally, eluting the molecules from the affinity particles, followed by separating the affinity particles from the eluted molecules (Example 3, column 8, lines 20-23);

wherein any of the steps b), c) ,d), e) if present, and f) if present may optionally be also performed in the presence of the detergent, wherein the use of detergent is sufficient to reduce loss of particles during any separation step (Example 3).

Weisburg teaches a method wherein the combining step (a) is carried out in the absence of detergent, but detergent is added prior to the separation step (b) (Example 3).

Weisburg teaches a method wherein the molecule of interest is selected from nucleic acids (Example 3, column 8, lines 1-2).

Weisburg teaches a method wherein the particles are selected from oligo-thymidine coated magnetic beads (Example 3, column 8, lines 10-12).

Weisburg teaches a method wherein the particles are composed of materials selected from metal oxides present inherently in the magnetic silica beads (Example 3, column 8, lines 10-12).

Art Unit: 1655

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CAR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103© and potential 35 U.S.C. 102(f) or (g) prior art under 35 U.S.C. 103(a).

7. Claims 2-3, 13-18, 1-4, 13-17, 20, 23-26, 33, 34, 44-47,48, 49, 50, 54-57 and 62-66 are rejected under 35 U.S.C. 103 (a) in view of Weisburg (U.S. Patent 5,466,577) (November 14, 1995).

Weisburg teaches the method of claims 2-3, 13-15, 19, 23, 24, 32, 34, 44-46, 49, 50, 54, 55 and 62-66 as described above.

Weisburg does not specify the concentration of anionic detergent in the range of .0005% to 2%.

Art Unit: 1655

However, it is *prima facie* obvious that selection of the specific concentration of a known detergent represents routine optimization with regard to production of desired soluble components which routine optimization parameters are explicitly recognized to an ordinary practitioner in the relevant art. As noted *In re Aller*, 105 USPQ 233 at 235,

More particularly, where the general conditions of a claim are disclosed in the prior art, it is not inventive to discover the optimum or workable ranges by routine experimentation.

Routine optimization is not considered inventive and no evidence has been presented that the specific concentration selection performed was other than routine, that the products resulting from the optimization have any unexpected properties, or that the results should be considered unexpected in any way as compared to the closest prior art.

8. Claims 2-3, 13-18, 19, 21, 23, 24, 29-30, 32, 34, 44-50, 52, 54, 55, 60-66 and 68 are rejected under 35 U.S.C. 103 (a) over Zhang et al. (U.S. Patent 5,942,391) (August 24, 1999) in view of Gallant et al (U.S. Patent 5,798,442) (August 25, 1998).

Zhang et al teaches the method of claims 2-3, 13-18, 19, 23, 24, 32, 34, 44-50, 54, 55 and 62-66 as described above.

Zhang et al does not teach the use of zwitterionic detergent 3-[cholamido-propyl]-dimethyl-ammonio]-1-propanesulfonate.

Gallant et al teaches the use of zwitterionic detergent 3-[cholamido-propyl]-dimethyl-ammonio]-1-propanesulfonate in affinity purification method (Column 22, lines 33 to

Art Unit: 1655

column 23, line 27).

It would have been *prima facie* obvious to one having ordinary skill in the art at the time the invention was made to substitute the affinity purification method with suitable zwitterionic detergent of Gallant et al in the method of Zhang et al in order to separate any protein or nucleic acid from any biological sample. An ordinary artisan would have been motivated to utilize the equivalent chaotropic agents along with the affinity purification method of Gallant et al in the affinity purification method of Zhang et al in order to accomplish the considerable and satisfactory purification of proteins and nucleic acids with an useful chaotropic agents

9. Claims 2-3, 13-18, 19, 22-28, 30, 32, 34, 44-50, 52, 54, 55, 58, 59, 62-66 and 68 are rejected under 35 U.S.C. 103 (a) over Zhang et al. (U.S. Patent 5,942,391) (August 24, 1999) in view of Stein et al (U.S. Patent 4,009,213) (February 22, 1977).

Zhang et al teaches the method of claims 2-3, 13-18, 19, 23, 24, 32, 34, 44-50, 54, 55, 62-66 and 68 as described above.

Zhang et al does not teach the use of cationic detergent dodecyl trimethyl ammonium chloride.

Stein et al. teaches the use of cationic detergent dodecyl trimethyl ammonium chloride. (Example 8, column 17, lines 65-67).

It would have been *prima facie* obvious to one having ordinary skill in the art at the time the invention was made to substitute the suitable cationic detergent of Stein et al in the method of Zhang et al since Stein et al states, "The use of the cationic compounds is

Art Unit: 1655

preferred in the separation of fatty alcohols of different melting points (column 6, lines 22-24)".

An ordinary artisan would have been motivated by the express statement of Stein et al. to utilize the cationic detergents of Stein et al in the method of Zhang et al in order to improve protein purification and in order to achieve the express advantage of a method, as noted by Stein et al, which can be preferably used for accomplishing separation of fatty alcohols of different melting points.

10. Claims 2-3, 13-18, 19, 23, 24, 32, 34, 44-50, 54, 55, and 62-68 are rejected under 35 U.S.C. 103 (a) over Zhang et al. (U.S. Patent 5,942,391) (August 24, 1999) in view of Tsaur et al (U.S. Patent 5,385,959) (January 31, 1995).

Zhang et al teach the method of claims 2-3, 13-18, 19, 23, 24, 32, 34, 44-50, 54, 55 and 62-66 and 68 are as described above.

Zhang et al do not teach the method wherein the polyethylene polymer is a polyvinyl alcohol.

Tsaur et al. teach the method wherein the polyethylene polymer is a polyvinyl alcohol. (Column 11, lines 11-44 and Claims 1-3).

It would have been *prima facie* obvious to one having ordinary skill in the art at the time the invention was made to substitute the polyethylene polymer polyvinyl alcohol of Tsaur et al in the method of Zhang et al since Tsaur et al state, "Indeed such reactions are well known in the art and widely used in protein purification (Column 11, lines 34-35)". An ordinary artisan would have been motivated by the express statement of Stein et al. to utilize the cationic detergents of

Art Unit: 1655

Tsaur et al in the method of Zhang et al in order to improve the protein purification and in order to achieve the express advantage of a method , as noted by Tsaur et al, which is well known in the art and widely used in protein purification.

11. Claims 2-3, 13-18, 19, 23, 24, 32, 34, 44-50, 54, 55, 62-66 and 68-69 are rejected under 35 U.S.C. 103 (a) over Zhang et al. (U.S. Patent 5,942,391) (August 24, 1999) in view of Taoda et al (U.S. Patent 6,180,548 B1) (January 30, 2001).

Zhang et al teach the method of claims 2-3, 13-18, 19, 23, 24, 32, 34, 44-50, 54, 55 and 62-66 and 68 as described above.

Zhang et al do not teach the method wherein the metal oxide is selected from titanium oxide.

Taoda et al. teach the method wherein the metal oxide is selected from titanium oxide (Column 4, lines 4-13 and Claims 1, 2 and 4).

It would have been *prima facie* obvious to one having ordinary skill in the art at the time the invention was made to substitute and combine the metal oxide selected from titanium oxide of Taoda et al in the method of Zhang et al since Taoda et al state, "Due to the oxidization-reduction effect of electrons and holes generated in titanium oxide during irradiation with light, the protein, amino acid, bacteria, and viruses adsorbed by the apatite film can be continuously decomposed and removed promptly (Column 4, lines 10-13)". An ordinary artisan would have been motivated by the express statement of Taoda et al. to substitute and combine the metal oxide selected from titanium oxide of Taoda et al in the method of Zhang et al. in order to

Art Unit: 1655

improve the protein purification and in order to achieve the express advantage of a method , as noted by Taoda et al, in which the protein, amino acid, bacteria, and viruses adsorbed by the apatite film can be continuously decomposed and removed promptly.

Conclusion

12. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Arun Chakrabarti , Ph.D. whose telephone number is (703) 306-5818. The examiner can normally be reached on 7:00 AM-4:30 PM from Monday to Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gary Jones, can be reached on (703) 308-1152. The fax phone number for this Group is (703) 305-7401.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (703) 308-0196.

Arun Chakrabarti,
Patent Examiner,
